MOHAMED EKRAMY MOHAMED SEBAK

SOFTWARE ENGINEER | FULL-STACK DEVELOPER

Egypt | +20 100 711 1002 | mohamedekramy2510@gmail.com
LinkedIn | GitHub | Portfolio

PROFILE

Software engineer building full-stack applications with Python and JavaScript. Currently developing Masahati, a coworking space management platform built with Django, HTMX, and PostgreSQL. Other projects include a React web IDE for a custom compiler and a virtual file system shell.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C#, C++
Web and APIs: React, Vite, Django, HTMX, Flask, Node.js, Express.js, REST APIs
Databases and tools: PostgreSQL, SQLite, MySQL, SQL Server, Git, GitHub, Docker, Docker Compose
Additional experience: ASP.NET Core MVC, Identity, Entity Framework Core, Hugging Face Inference API, pandas, NumPy, scikit-learn

PROJECTS

Masahati | In development | Source (private)

Python, Django, HTMX, PostgreSQL

- Developing a platform for study and coworking spaces with owner, staff, customer, and platform workflows.
- Implementing PostgreSQL-backed seating, timed visits, bookings, checkout, and cash review with Django templates and HTMX.

HealthGuard | Source (private)

React, JavaScript, Manifest V3, Flask, Hugging Face

- Developed a Manifest V3 Chrome extension to capture selected webpage claims for analysis through a Flask API.
- Integrated optional Hugging Face zero-shot classification with a rule-based mock fallback; built React popup states and documented the API contract. Educational prototype.

PUBG Language Transpiler and Web IDE | Source (access required)

Python, React, Vite, REST API

- Built a tokenizer, parser, semantic analyzer, and Python code generator for a custom language across eight language constructs.
- Implemented six categories of symbol-table-based static checks, including types and undeclared identifiers, and a React/Vite IDE for visualizing compiler stages, outputs, and errors.

AI Search and Game Algorithm Projects

Python, A, Greedy Search, Genetic Algorithm, Minimax*

- Applied Greedy Best-First Search, A*, Hill Climbing, and a Genetic Algorithm to pathfinding; developed a Minimax Tic-Tac-Toe AI with three difficulty levels.

College Attendance System | Source

C#, .NET 8, ASP.NET Core MVC, Identity, EF Core, SQL Server

- Developed an attendance-application foundation with Identity flows including registration, email confirmation, password reset, and two-factor authentication.
- Used .NET 8, EF Core, and SQL Server LocalDB; applied HTTPS redirection, exception handling, and HSTS with responsive Razor Pages.

Librarium | Source

Python, Flask, SQLite, SQLAlchemy, Docker

- Built a Flask/SQLite library application with member and admin roles, catalog search and filtering, borrowing, returns, and loan history.
- Packaged the application with Docker Compose and documented ERD, DFD, and sequence diagrams.

MiniFAT Virtual File System Shell

Python, File allocation tables, CLI

- Implemented a 1 MB virtual FAT file system in Python with a 13-command interactive shell.

EDUCATION

B.Sc. in Software Engineering | Assiut National University
Faculty of Computers and Artificial Intelligence | Expected 2027 | CGPA 3.76

TRAINING

Digital Egypt Pioneers Program (DEPI) - Data Engineering | Dec 2025 - Jul 2026. SQL, ETL concepts, databases, and data processing.
National Telecommunication Institute (NTI) - Python | 27 Jun - 22 Jul 2026. Python, OOP, problem solving, and data structures.
